BRINGING LIFE BACK TO THE HOBBLE CREEK RIVER

CASON ACOR

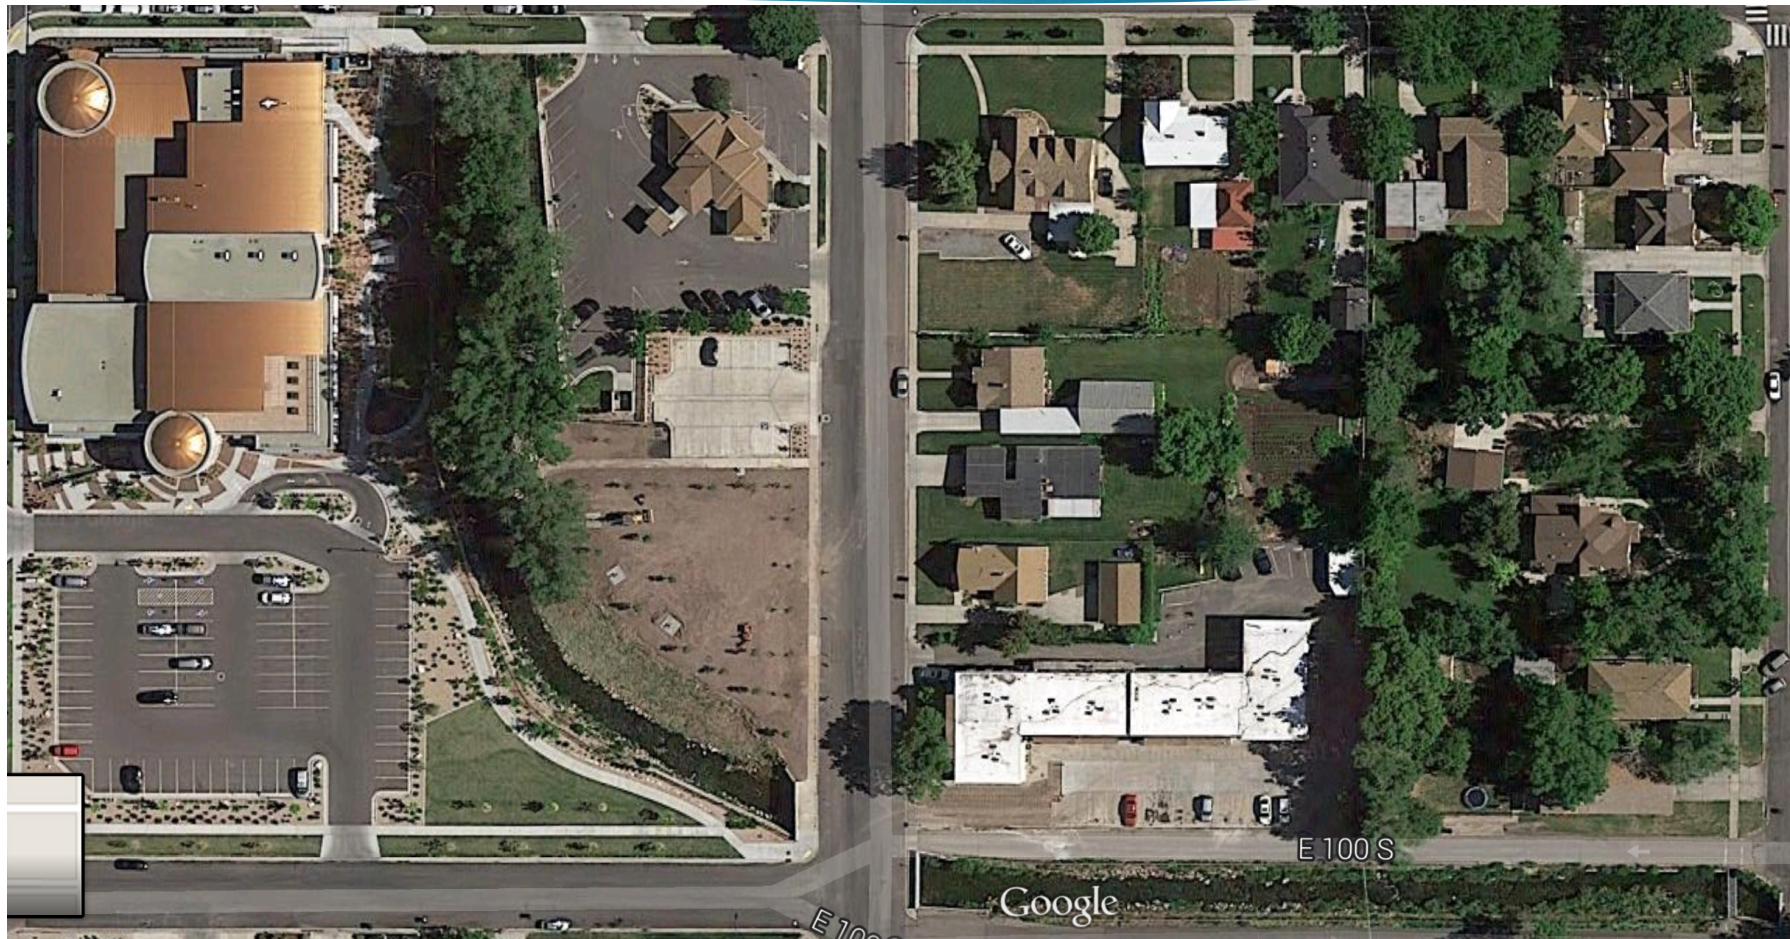

Hobble Creek

- ▶ Hobble Creek is the main river running out of Hobble Creek Canyon in Springville, UT.
- ▶ It once was an integral part of the city culture that drew the early Mormon pioneers to settle there.
- ▶ Now, it has fallen into neglect and pollution, and the majority of the river runs now through concrete ditches rather than its natural banks.

Project Summary

- ▶ For the restoration project, I've chosen to focus on the section of the river that is most in the public eye. From the corner of 100 S and 200 E, to 100 N and 100 W.
- ▶ This section of the river runs parallel to the public library and passes directly under the intersection of Center Street and Main Street.

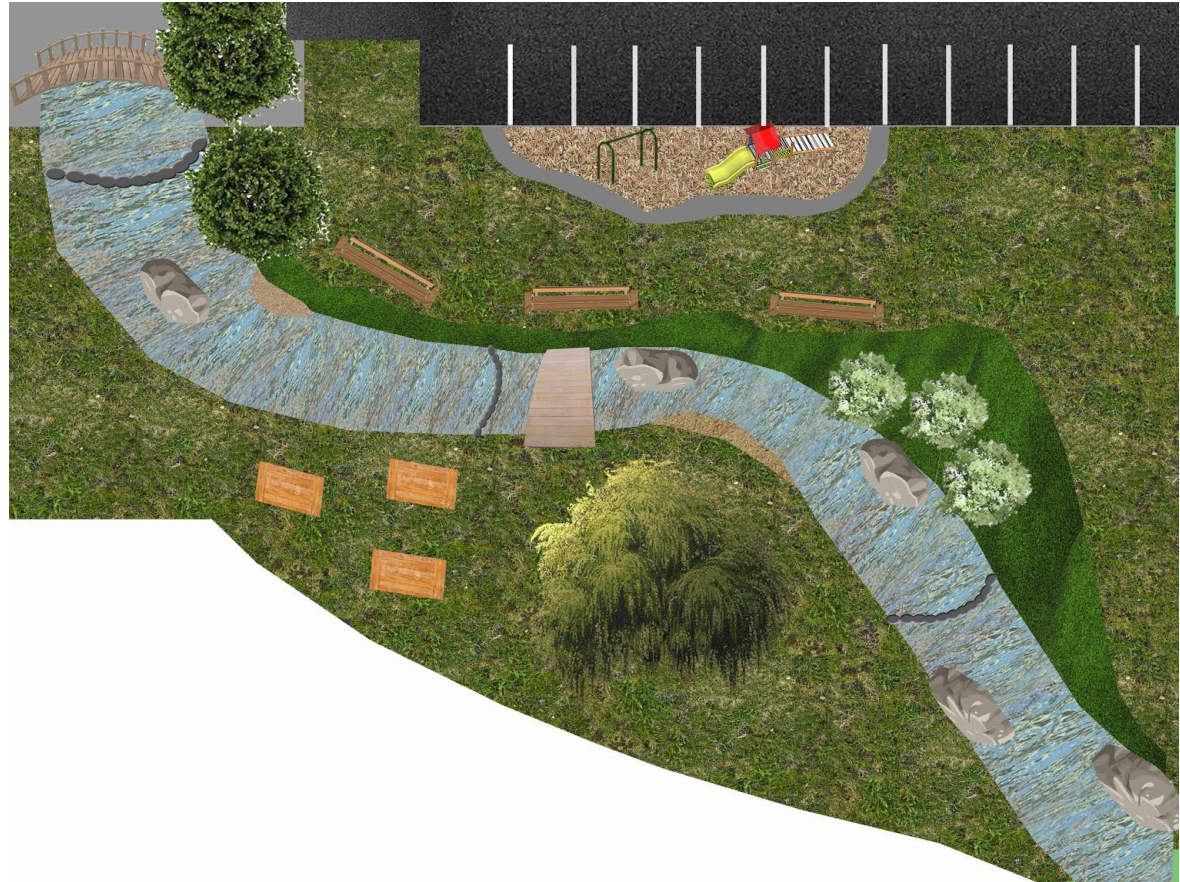

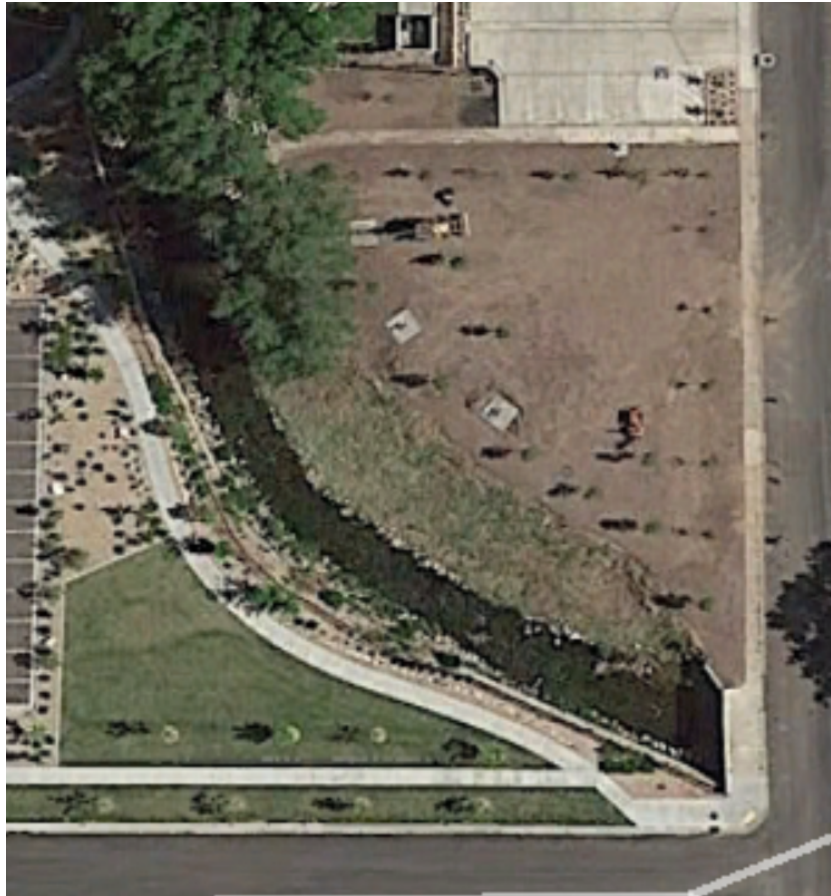

Current Condition

Current Condition

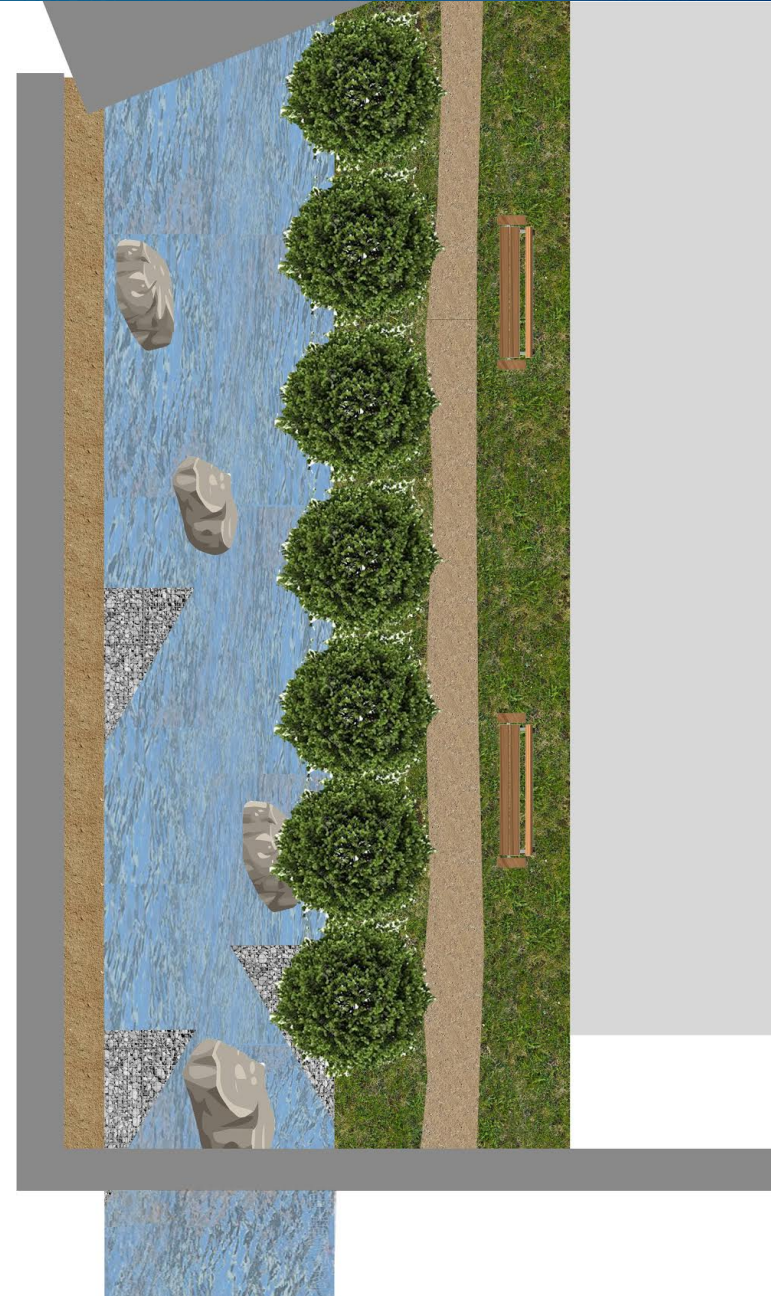

Proposed Changes

Proposed Changes

- ▶ Parallel to the library, running south to north.

Conclusion

- ▶ The proposed changes will add structure and health to the river, bringing it back to life.
- ▶ Once again it will become a focal point of community activity.
- ▶ Boulders, point bars, vegetation, and wedge bars are just a few of the many improvements that will be made to increase the river's health.
- ▶ The proposed plan will be presented to the Springville City Council where connection have already been made with the Mayor and several members of the City Council.
